

Information in English

Question: is there any information about the services blocking, consent or logging?

- Below a brief presentation of the services blocking and consent.

PDL-Services-04.pdf

Question: is there any information about Inera's Identity Provider and how it relates to the Reference Architecture for Identity and Access Management?

- The Reference Architecture for Identity and Access Management (Referensarkitekturen för identitet och åtkomst) http://rivta.se/documents/ARK_0046/ is by its nature product independent. However, in this presentation of the Reference Architecture, one can more or less replace any reference to an Identity Provider with Inera's IdP, with its capabilities for both SAML and OIDC. Note also that Inera's IdP also provides the corresponding functionality of a Authorization Service mentioned in the document and in the presentation below.

- Below, you will find a film about the Reference Architecture for Identity and Access Management, with English subtitles.

Reference Architecture for Identity and Access Management

Driving forces – business needs

The diagram illustrates the driving forces for business needs in identity and access management. It features a central illustration of a person at a computer with a hand icon, surrounded by various icons representing different aspects of identity management. To the left, there are three green boxes: 'Single sign-on' (Fast, easy and secure access to information), 'New authentication methods', and 'Mobile workflows'. To the right, there are three green boxes: 'Quality assurance of eID', 'Standardisation' (reduce lock-in and cost), and 'Secure collaboration' (across organisations).

A secure collaboration between organizations can mean sharing the same IT system.

Question: Is there any general information in English about Inera and its services?

- The technical nature of the service lends it well to using google translate on many of the documents, although Inera takes no responsibility for the result.
- By sending an email to support@inera.se, you can get more answers to your questions.
